

Experiment 6A

Zero-Shot Prompt:

Q.no	Question	Prompt type	Model response	Actual answer	Correct/incorrect	Error type	Remarks
1	James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?	Zero-shot prompt	540 meters	540 meters	Correct	None	Calculated perfectly without examples
2	Kylar went to the store to buy glasses for his new apartment. One glass costs \$5, but every second glass costs only 60% of the price. Kylar wants to buy 16 glasses. How much does he need to pay for them?	Zero-shot prompt	\$64	\$64	Correct	None	Two step calculation done correctly
3	Carla is downloading a 200 GB file. Normally she can download 2 GB/minute, but 40% of the way through the download, Windows forces a restart to install updates, which takes 20 minutes. Then Carla has to restart the download from the beginning. How long	Zero-shot prompt	80 GB = $80 \div 2 = 40$ minutes	40 min	Correct	None	Answer is given without examples
4	A new program had 60 downloads in the first month. The number of downloads in the second month was	Zero-shot prompt	$60 + 180 + 126 = 366$	366	Correct	None	Single percentage handled correctly

	three times as many as the downloads in the first month, but then reduced by 30% in the third month. How many downloads did the program have total over t						
5	Two trains leave San Rafael at the same time. They begin traveling westward, both traveling for 80 miles. The next day, they travel northwards, covering 150 miles. What's the distance covered by each train in the two days?	Zero-shot prompt	230 miles	230 miles	Correct	None	Done correctly

Few-shot prompt:

Q.no	Question	Prompt type	Model response	Actual answer	Correct/incorrect	Error type	Remarks
1	James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?	Few-shot Prompting	540 meters	540 meters	Correct	None	Single percentage handled correctly with explanations
2	Kylar went to the store to buy glasses for his new apartment. One glass costs \$5, but every second glass costs only 60% of the price. Kylar wants to buy 16 glasses. How much does he need to pay for them?	Few-shot Prompting	\$64	\$64	Correct	None	Done correctly
3	Carla is downloading a 200 GB file. Normally she can download 2 GB/minute, but 40% of the way through the download, Windows forces a restart to install updates, which takes 20 minutes. Then Carla has to restart the download from the beginning. How long	Few-shot Prompting	80 GB = $80 \div 2 = 40$ minutes	40 min	Correct	None	Examples are given and output is precise
4	A new program had 60 downloads in the first month. The number of downloads in the second month was	Few-shot Prompting	$60 + 180 + 126 = 366$	366	Correct	None	No extra explanations are given

	three times as many as the downloads in the first month, but then reduced by 30% in the third month. How many downloads did the program have total over t						
5	Two trains leave San Rafael at the same time. They begin traveling westward, both traveling for 80 miles. The next day, they travel northwards, covering 150 miles. What's the distance covered by each train in the two days?	Few-shot Prompting	230 miles	230 miles	Correct	None	Answer is returned correctly

Chain of thoughts:

Q.no	Question	Prompt type	Model response	Actual answer	Correct/incorrect	Error type	Remarks
1	James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?	Chain of thoughts	540 meters	540 meters	Correct	None	Thoughts are iterated for better output
2	Kylar went to the store to buy glasses for his new apartment. One glass costs \$5, but every second glass costs only 60% of the price. Kylar wants to buy 16 glasses. How much does he need to pay for them?	Chain of thoughts	\$64	\$64	Correct	None	Output is precise without explanations
3	Carla is downloading a 200 GB file. Normally she can download 2 GB/minute, but 40% of the way through the download, Windows forces a restart to install updates, which takes 20 minutes. Then Carla has to restart the download from the beginning. How long	Chain of thoughts	80 GB = 80 ÷ 2 = 40 minutes	40 min	Correct	None	Handles correctly
4	A new program had 60 downloads in the first month. The number of downloads in the second month was three times as many as the downloads in the first month, but then reduced by 30% in the third	Chain of thoughts	60 + 180 + 126 = 366	366	Correct	None	Done correctly

	month. How many downloads did the program have total over t						
5	Two trains leave San Rafael at the same time. They begin traveling westward, both traveling for 80 miles. The next day, they travel northwards, covering 150 miles. What's the distance covered by each train in the two days?	Chain of thoughts	230 miles	230 miles	Correct	None	Done correctly
